HAND BRAKE INTERLOCK PTO SWITCH

Only operational when the hand brake engages. If the hand brake is released before the valve is switched off, the valve automatically resets disengaging any operating devices, eliminating immeasurable damages.

- 1 The most compact valve available for the tightest in-cab installation:
 - * body diameter 41mm x 45mm long
 - * extended nose-thread for mounting in padded dash-boards
- 2 Pre-wired solenoid only requiring connection at the hand brake
 - * saves on installation time, saving on fitting costs
- 3 Push-in 6/4mm fittings, rear or side ported, no extra fitting required
- 4 Indicating or blank knob options

INSTALLATION

If handbrake switch is to earth, supply power to RED wire, connect BLACK wire to switch. i.e. Scania.

If handbrake switch is positive, connect RED wire to switch, connect BLACK wire to earth.

NB: When solenoid is activated switch will work.
When solenoid is de-activated the switch is held in the closed position.
