

## **OILPATH OP115 CROSS LINE RELIEF VALVE**

The Oilpath OP115 Cross Line Relief Valve is an economically priced cushion relief valve housed in an aluminium alloy envelope.

Sudden shocks and surges experienced when operating multiple hydraulic components can be eliminated by inserting this valve between the equipment and its control (see diagram below).

The valve operates by diverting oil flow to the opposite circuit immediately it senses a sudden pressure overload. Equipment is thus assured of a longer, smoother working life with greatly reduced cavitation effects.

The OP115 valve can be used to advantage in many circuits. A common application is with torque motors, where stopping, starting and reversing surges can present problems.
